HAOLIN WU

I am a Software Engineer with three years of industry experience developing in professional environments. During that time, I have handled entire software life-cycles including analysis, testing and DevOps, whilst working in teams both as a developer and project manager.

With a double major degree in both computer science and data science, I am also well versed and have practical experience in web development, data integration, data visualization, data mining, high performance computing, and machine learning (incl. deep learning).

I am hard working, pay attention to detail, work well in teams, and manage my time well to meet deadlines.

EDUCATION

2020 – 2021	Bachelor of Science (Honours) Honours in Computer Science and Data Science Research Topic: <i>Deep Learning for Information Extraction from PDF Tables</i> First Class Honours, 6.375 GPA	The University of Western Australia
2016 – 2019	Bachelor of Science (Double Major) Degree Specific Major: <i>Computer Science</i> Second Major: <i>Data Science</i>	The University of Western Australia

EXPERIENCE

2021 - current	Software Engineer Developed a REST API using Django Rest Framework to replace an existing NoSQL database to improve referential integrity and scalability. The API integration was implemented within a legacy AngularJS application, and then containerized using Docker, with continuous integration through GitHub Actions. A Secure Development Lifecycle (SDLC) was used, along with Test Driven Development (TDD) approaches. The application was then deployed using AWS. Django Rest Framework / Docker / Python / TDD / CI/CD / SDLC / AngularJS	FairSupply Analytics Pty Ltd.
2020 - 2021 part time	Teaching Assistant Teaching Assistant for CITS3403 Agile Web Development and CITS3004 Cybersecurity. Teaching agile methodologies, Python3 web frameworks, and continuous integration and deployment techniques. Additionally teaching containerization through Docker, web vulnerabilities, white hat hacking, and cyber-attack prevention. Python / Flask / Docker / Git / JS / PostgreSQL / CTFs	The University of Western Australia
2019 – 2020	Full Stack Engineer Project management system developed for the Raine Study, a scientific study collecting data over 30 years from a cohort of participants. I used agile methodologies with Python/Django back-end and JQuery front-end technologies, while deploying to AWS services such as EC2, RDS, and S3. Python / Django / Bootstrap / Git / JS / AWS	The Raine Study / UWA Centre for Software and Security Practice
2018 – 2019	Front-End Developer User interface and user experience (UI/UX) development of software for BHP, PwC, and other companies using Ruby and React. JS / Bootstrap / Redux / React / CSS / JSX	Corporate Governance Risk Pty Ltd
2017 – 2018	Software Intern Full stack development of a variety of small apps for clients of UWA CSSP. Python / Django / HTML / CSS	UWA Centre for Software and Security Practice

ACHIEVEMENTS

2020	Teaching Commendation For outstanding teaching in CITS3403, Agile Web Development	The University of Western Australia
2018	Unearthed Hackathon Young Innovator Winner Sponsored by BHP and Amazon AWS	Unearthed Solutions, Perth
2010-2014	Scotch College Dual Scholarship Recipient Dual Scholarship Recipient in both Academics and Music	Scotch College, Perth

HIGHLIGHTS

Coursework	High Distinction Units I have achieved High Distinctions in the following units: Agile Web Development, Cloud Computing, Artificial Intelligence and Adaptive Systems, Professional Computing, Data Warehousing, High Performance Computing.
Research	Deep Learning for Information Extraction from PDF Tables Honours research project exploring deep learning methods for extracting tabular semantics from tables inside PDFs into a machine readable format using TensorFlow and PyTorch . Allows for older PDF documents and forms such as maintenance procedures and medical discharge letters independent of domain to be stored as JSON and standardised. The project surveys, implements, and integrates Computer Vision and Natural Language Processing techniques for table extraction and semantic relation identification.
Project	Various Projects Some projects completed over the years include machine learning web applications, customer transaction applications, and webhook cronjob integrations. These projects are often developed using Test Driven Development (TDD), Continuous Integration and Deployment (CI/CD), and DevOps principles. These projects can be viewed in detail within my portfolio. https://www.haolin.dev

HOBBIES

Coding is an art to me. In my spare time I enjoy automating tasks in my day to day life, such as smart home integration and some custom Fintech. I also love playing piano, acrylic painting, swimming, and fishing.

NON PROFIT

I created software to manage the **UWA Ethical Hacking Club**, allowing weekly events and notifications. Additionally I taught English to international students at **Melbourne University** and a variety of subjects at **Scotch College** to secondary students.
